Windows Virtual Desktop

Windows Virtual Desktop

High Level Architecture

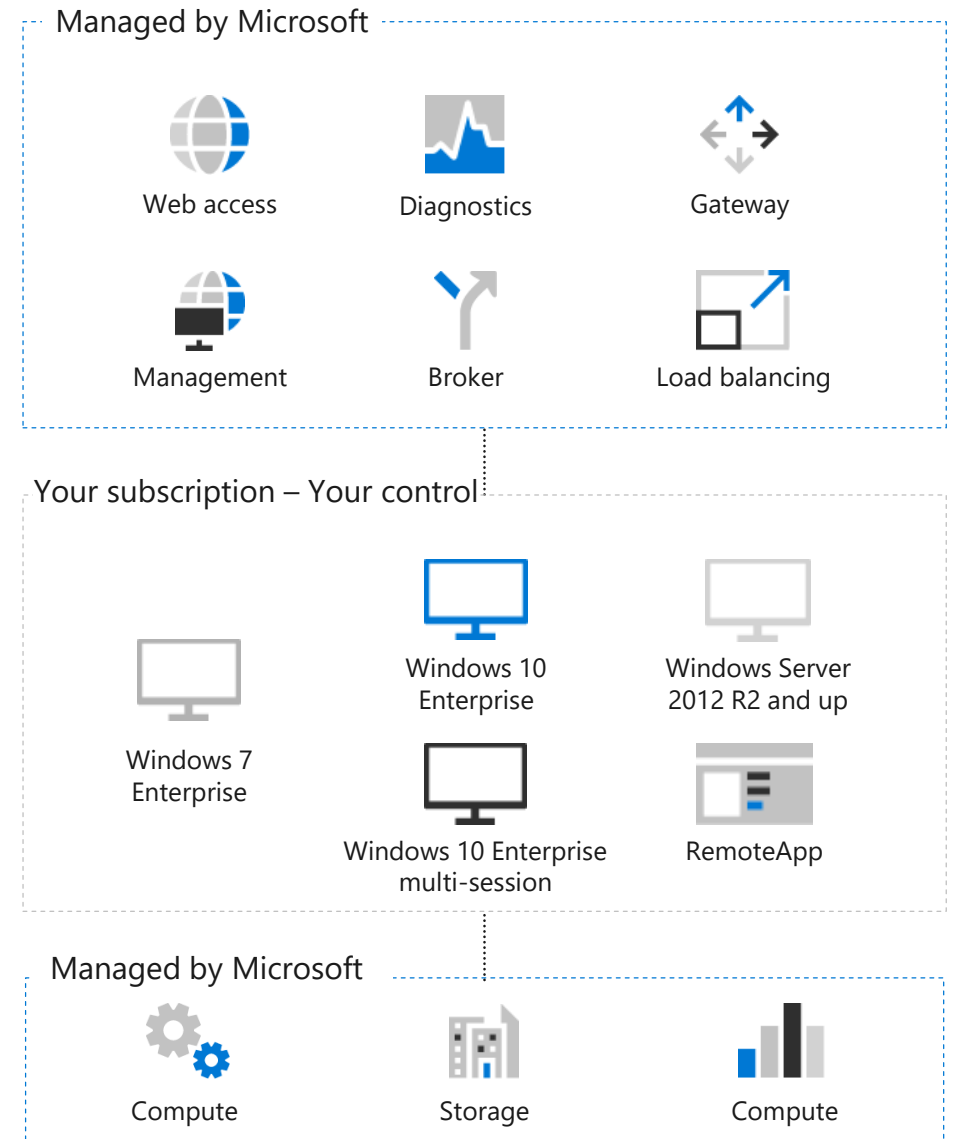

Use Azure Active Directory identity management service

Provide virtualization infrastructure as a managed service

Deploy and manage virtual machines in Azure subscription

Manage using existing tools like Configuration Manager or Microsoft Intune

Connect easily to on-premises resources

Requirements

Azure Subscription

Azure Active Directory setup

- Full admin rights
- Azure AD Connect
- ADFS (optional for SSO)
- ADDS (optional)

Domain controller

Optional: Networking/on-premises connectivity – express route, VPN, etc.

Entitlement check (licensing)

WVD Architecture Overview

Administrators

 WVD Admin

Windows Virtual Desktop

 Subscription Admin

User Connection Flow

1. User launches RD client which connects to Azure AD, user signs in, and Azure AD returns token
2. RD client presents token to Web Access, Broker queries DB to determine resources authorized for user
3. User selects resource, RD client connects to Gateway
4. Broker orchestrates connection from host agent to Gateway

Improved Isolation: Reverse Connect

Outbound WebSocket connections from customer VMs to Broker and Gateway

Bidirectional communications between VMs and RD infra over https (443)

No inbound ports need be opened to the customer environment

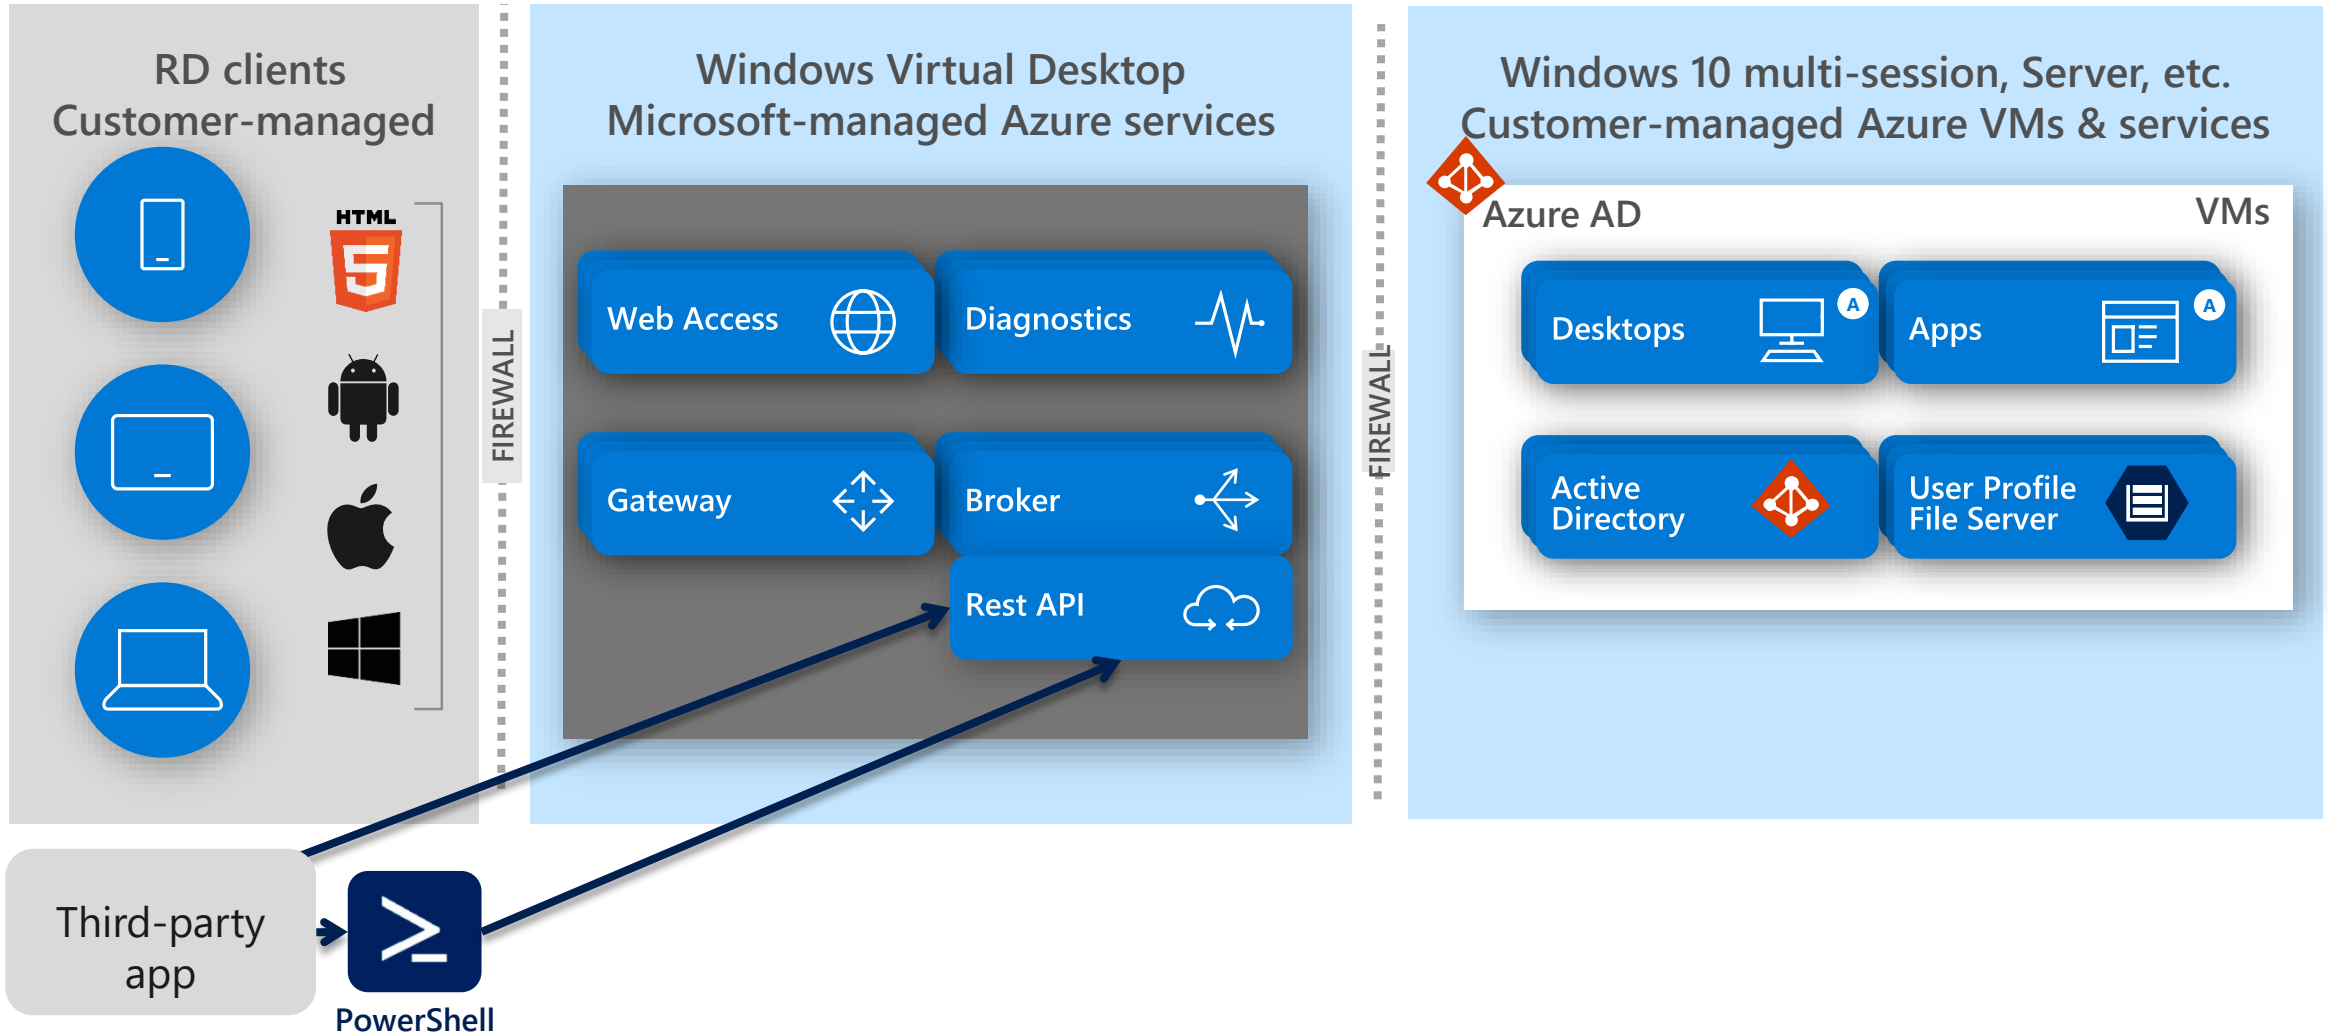

HostPool flexibility

- RemoteApp and desktop app groups
- Set different load balancing algorithms
- Single or multi-session session host VMs
- Pooled or personal session host VMs
- Windows Server 2016/19 or Windows 10/7 VMs

Extensible Platform

Third-party apps can use PowerShell or REST API to extend Windows Virtual Desktop platform

Examples: Deployment automation, VM scaling & provisioning, Web UI to configure, monitor, and troubleshoot, etc.

Windows Virtual Desktop Clients

Connectivity

Remote Desktop Client (RDClient)

Preferred

Win 10\7

Start menu integration / Notifications

Web Client

Requires HTML5 compatibility

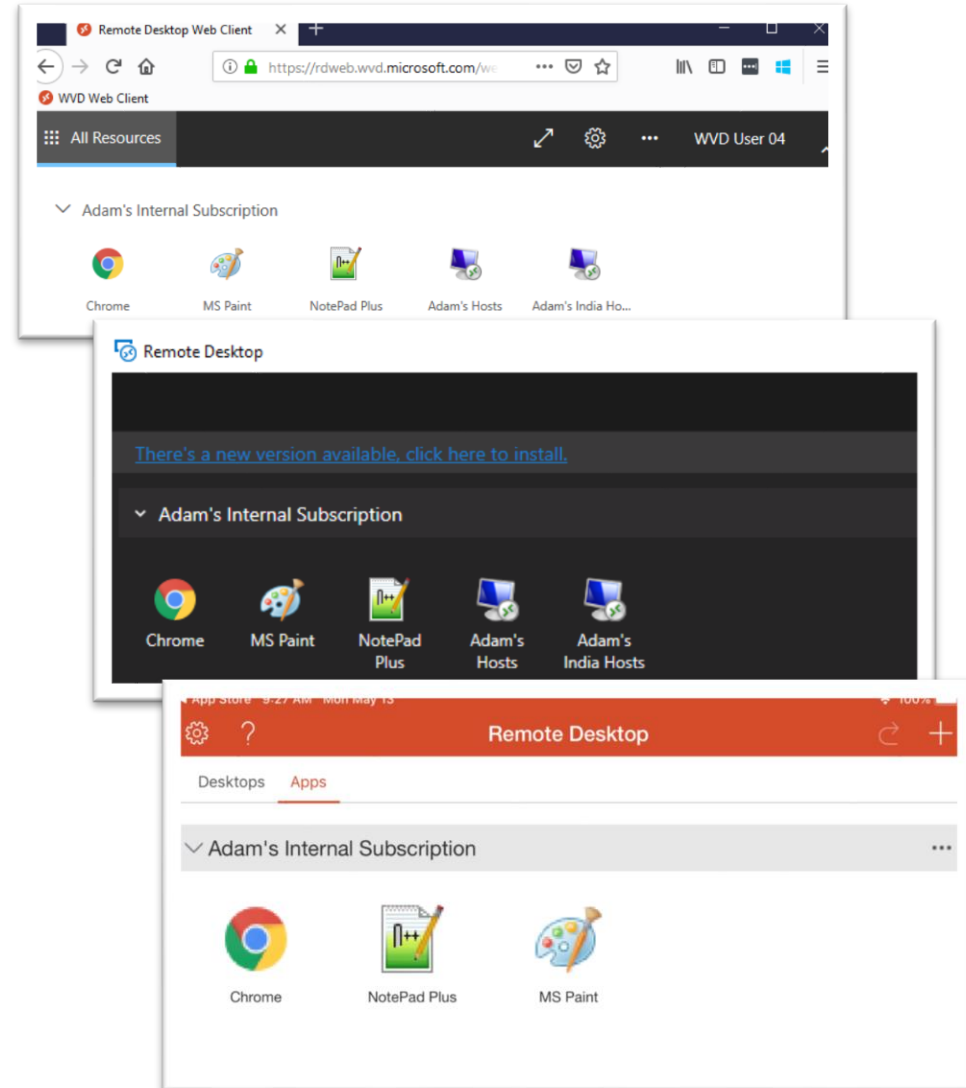

Minimum integration with OS

Mobile Clients

Mac OS

iOS

Android

Deploy Management UI

Prerequisites

Contributor on the subscription
Global Admin on Azure AD Tenant
Owner / Contributor on subscription
RD Owner or RD Contributor on the
WVD Tenant

Deploy

- GitHub

`aka.ms/managementUI`

Operation in Management UI

If management UI failed to deploy

- GitHub
aka.ms/manuibootcamp

Deploy Diagnostics UI

Prerequisites

WVD deployment (tenant & hosts)

RD Owner or RD Contributor on the WVD Tenant

Global Admin on Azure AD Tenant

Owner on Azure subscription

Deploy

- GitHub

aka.ms/diagnosticsUI

- Create AD Application
- Create an Azure Log Analytics workspace
- Deploy

aka.ms/diagnosticsUIdeploy

If diagnostic UI failed to deploy

- GitHub

aka.ms/diaguibootcamp

FSLogix Profile Container on Azure NetApp Files

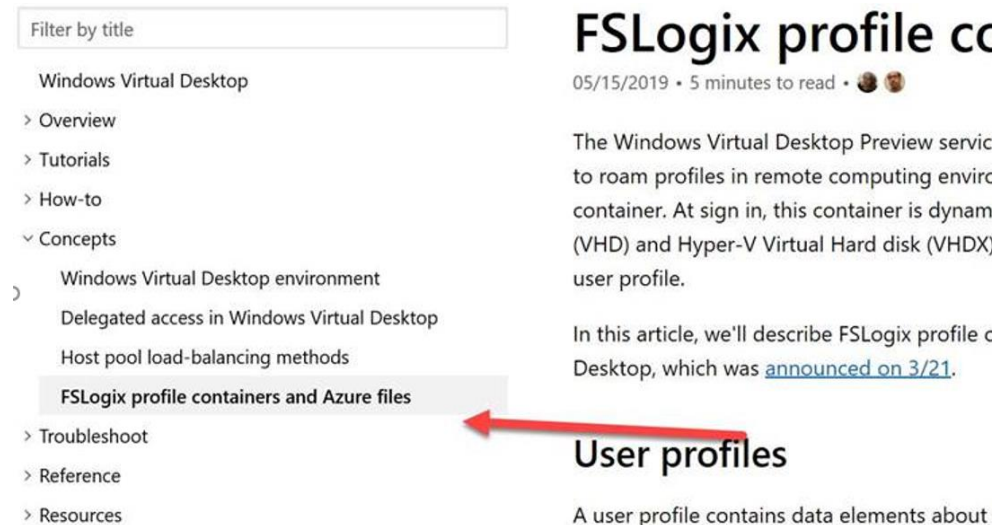

Deploy

- Register for Azure NetApp Files

<https://docs.microsoft.com/en-us/azure/azure-netapp-files/azure-netapp-files-register>

- How to setup Azure NetApp Files with WVD

The screenshot shows the Microsoft Docs interface. On the left is a navigation pane with a search bar labeled 'Filter by title'. Below it, the 'Windows Virtual Desktop' section is expanded, showing a list of topics: Overview, Tutorials, How-to, Concepts, Windows Virtual Desktop environment, Delegated access in Windows Virtual Desktop, Host pool load-balancing methods, **FSLogix profile containers and Azure files** (highlighted with a red arrow), Troubleshoot, Reference, and Resources. The main content area on the right displays the article 'FSLogix profile containers and Azure files', dated 05/15/2019, with a 5-minute read time. The article text describes the Windows Virtual Desktop Preview service and its use of FSLogix profiles. Below the article title, the heading 'User profiles' is visible, followed by the start of a paragraph: 'A user profile contains data elements about'.

FSLogix profile containers and Azure files

05/15/2019 • 5 minutes to read • 🧑🏽🧑🏽

The Windows Virtual Desktop Preview service allows you to roam profiles in remote computing environments. At sign in, this container is dynamic (VHD) and Hyper-V Virtual Hard disk (VHDX) user profile.

In this article, we'll describe FSLogix profile containers and Azure files, which was [announced on 3/21](#).

User profiles

A user profile contains data elements about

Azure Files and FSLogix Profiles

Abstraction

Why are profiles?
What is Azure Files?

History

UPD
Performance / S2D

Why Azure Files

Cost vs S2D
Performance = S2D

What is coming

DC
Azure AD

Migrating Existing VDI/RDS environment to Azure

What are the pre-reqs to migrating RDS to Azure

Azure Subscription

- ✓ Initial account setup including active directory

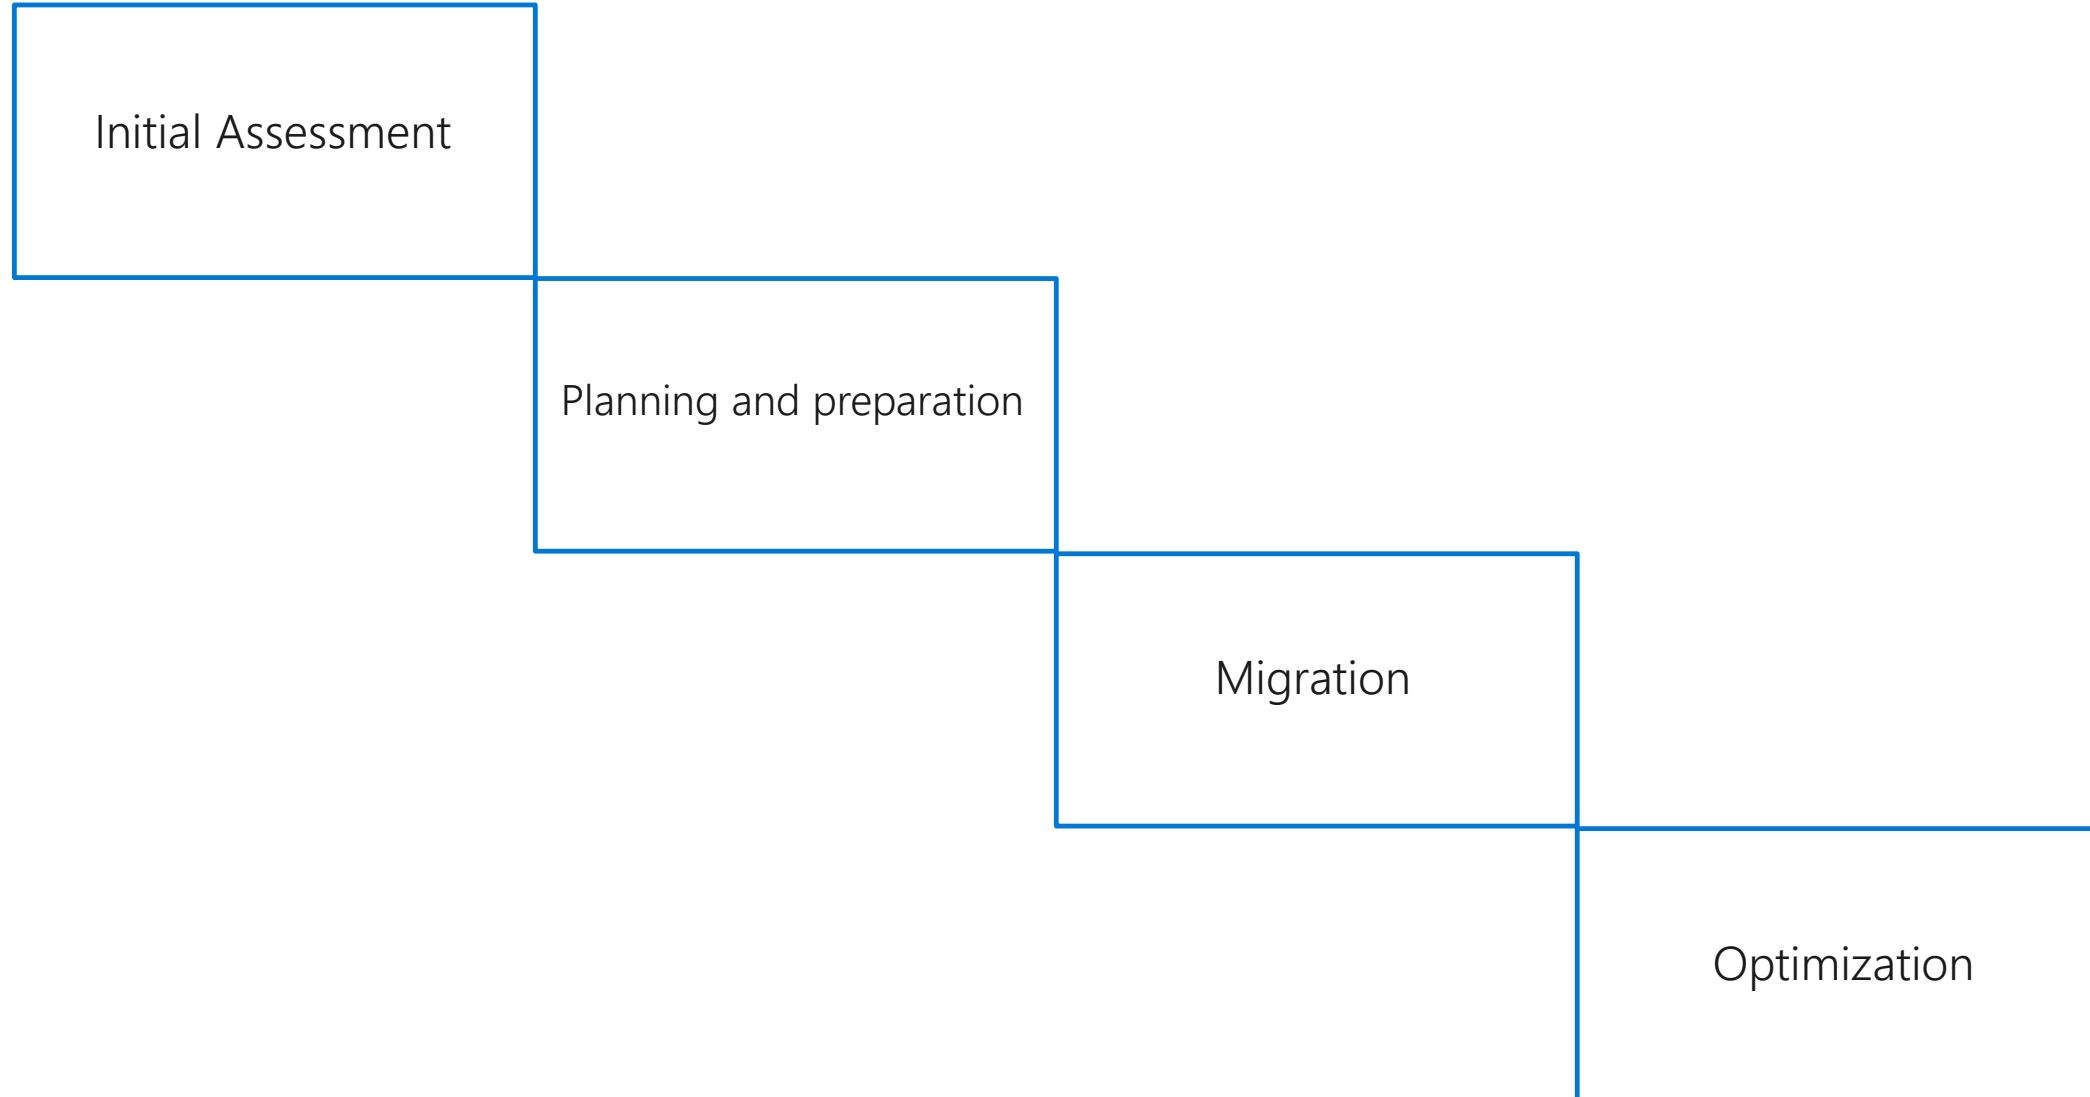

Licensing

- ✓ For RDS on Azure: Windows Server and RDS CALs/SALs
- ✓ For WVD: M365 E3/ E5/ F1, Windows E3/ E5/ A3/ A5 + [WS and RDS CALs/ SALs if RDSH workload]

Existing VM Image

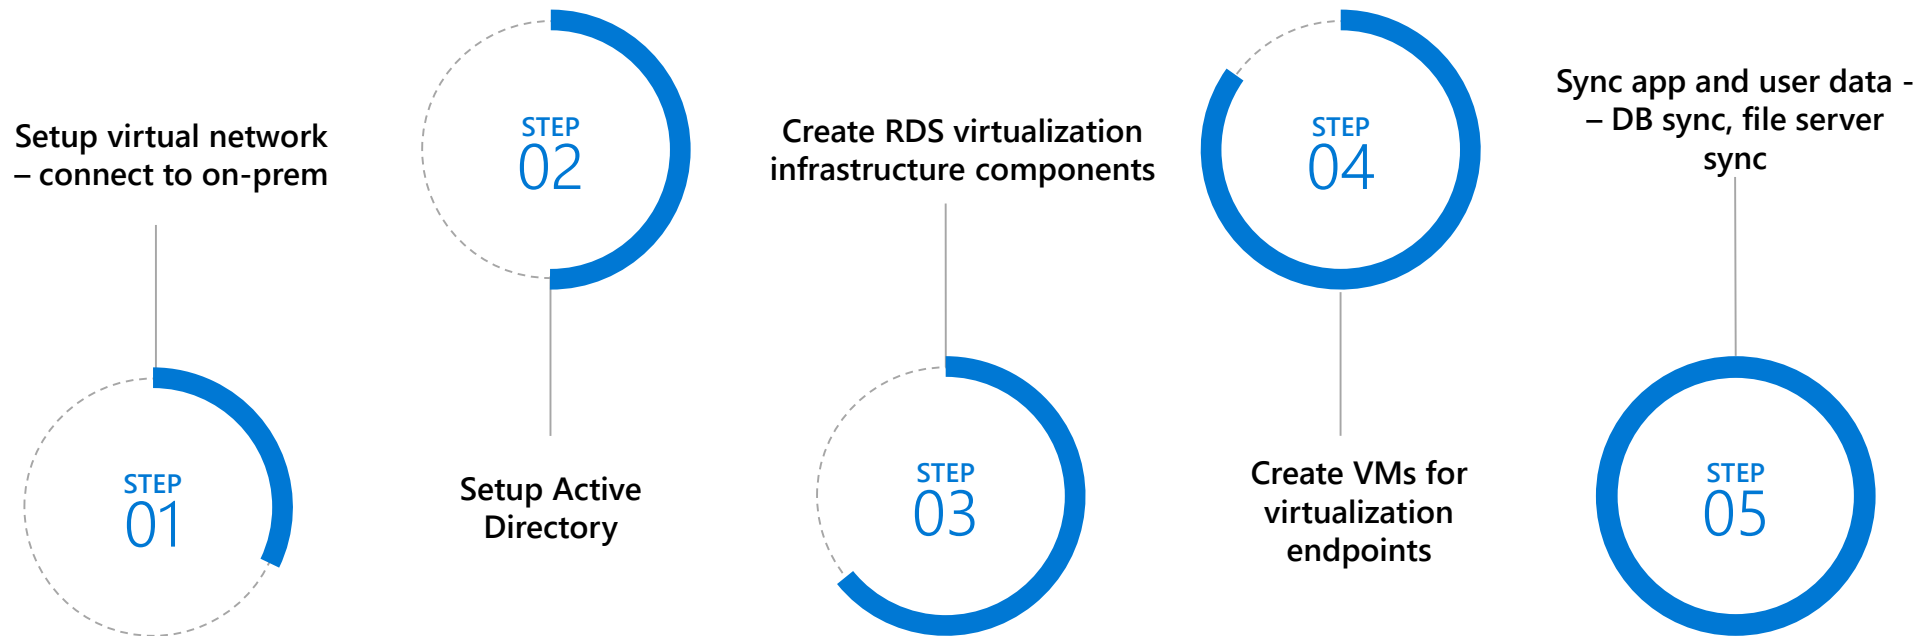

- ✓ Desktop and app images to host on Azure VMs

Migration Process of RDS workloads to Azure

Migration Process – Migration

In this step, the customer will perform the actual migration:

Note: ASR is the only Microsoft tool that performs this migration and it supports client SKUs, as well.

Migration

- Azure Site Recovery
- Azure File Sync for profiles
 - Convert the profiles (tool coming for UDP to FSLogix)

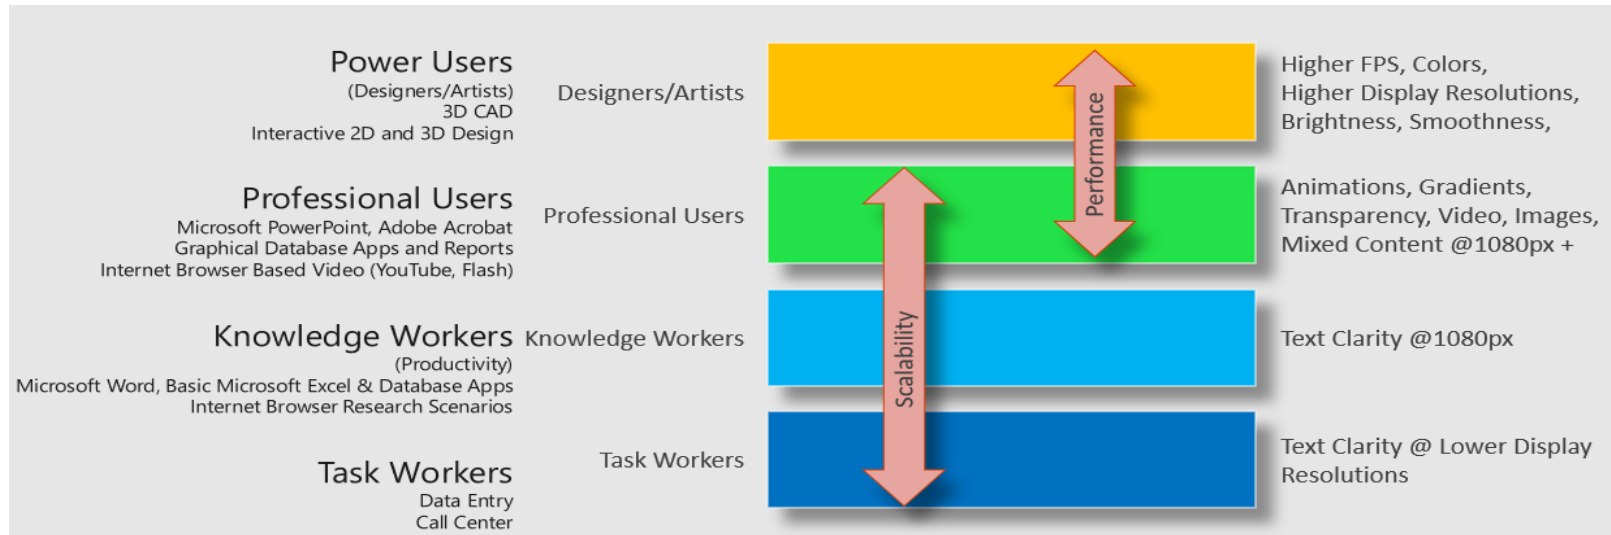

Optimization

VM Sizing

Recommended VM sizing based on user personal

Session Load Balancing

Load Balancing

- Load Balancing Options

- Breadth-First load balancing

- Set-RdsHostPool <tenantname> <hostpoolname> -BreadthFirstLoadBalancer
 - Set-RdsHostPool <tenantname> <hostpoolname> -BreadthFirstLoadBalancer -MaxSessionLimit ###

- Depth-first load balancing

- Set-RdsHostPool <tenantname> <hostpoolname> -DepthFirstLoadBalancer -MaxSessionLimit ###

Session Host Scaling

Deploy

- GitHub

aka.ms/wvdsclning

Scaling Session Hosts

Benefits

Current state

- VM / Task Scheduler

Setup

- Setup Config.json

- Time bound / session count

Future

- Azure Automation

- Service component in WVD

- Event based

Alternatives

- PS / APIs
